

VA Connecticut Healthcare System – Clinical Psychologist Research

Seeking an early career clinical psychologist to participate in treatment and non-treatment studies of obesity and eating disorders among Veterans. The individual will work closely with faculty and other trainees in the **Veterans Initiative for Eating and Weight** (The VIEW at VA CT) directed by [Dr. Robin Masheb](#). Candidates must hold a doctoral degree in clinical or health psychology and have completed an APA-approved internship, and have clinical experience with obesity and/or eating disorders (in particular behavioral weight loss treatments and/or cognitive-behavioral therapies). Ideal candidates will have strong psychiatric assessment experience (including semi-structured diagnostic interviews), organizational and data management skills, statistical expertise, and peer-reviewed publication history. The position is for a minimum of two years, and is well-suited for persons pursuing clinical-research careers. Extensive mentorship opportunities exist for publication and grant-writing including preparation of Career Development Award applications. Applicants can be licensed or license-eligible.

The position is located at the at VA Connecticut Healthcare System's PRIME Center, one of 19 national VA Centers of Innovation (COINs), with 15 junior and senior VA-funded investigators, and affiliation with the Yale School of Medicine. Interested candidates should send a CV and statement of interests by email to: Robin Masheb, Ph.D., at robin.masheb@yale.edu. Reference letters will be requested after the initial review.
