

UC San Diego School of Medicine: Women's Cardiovascular Health Research Center

The Center will train postdoctoral fellows to become leaders in translational research related to cardiovascular health among women. In this program, the trainees will become intimately involved with the Center research projects, conduct their own independent studies, complete relevant didactic coursework and receive leadership training in preparation for careers as independent investigators. There are three positions available with a training duration of 2 years each.

The UCSD AHA SFRC on women's cardiovascular health includes a training component for postdoctoral fellows (<https://medschool.ucsd.edu/som/fmph/divisions/prevmed/research/wrc/pages/default.aspx>).

Currently, we have one spot available for a postdoc who is interested in translational research on sedentary behavior.
