

Two Positions Available: Embedded Psychologist Program, Kaiser Permanente

Kaiser Permanente Embedded Psychologist Program (EPP) is looking for a well-qualified Psychologist to work in our Manteca, CA and Stockton, CA primary care clinics. These are a great opportunity to get into a large medical system with great (and I mean really great--can't understate that!) pay and benefits.

The incumbent will have the opportunity to work on a interdisciplinary team in a medical setting geared toward whole-person, integrated healthcare. The EPP focuses on helping patients with mental health concerns which have a medical/physical manifestation. Psychologists work as gatekeepers to mental healthcare in the Kaiser system, and serve as emissaries on medical treatment teams.

The position is for a psychological assistant or licensed psychologist; applicants must have a doctorate but no prior postdoc required. Please have interested parties contact Sean at 801-602-8278.
